

Banner Clip Installation

For fabric graphics or solid fabric panel installation onto EZ6 or EZ12 truss.

Graphics may be on either side of a banner. The top seam will determine which side faces you.

Rigid strips are sewn into the top and bottom ends of the banner. Fold the top of the banner over once, so the strip is surrounded by fabric.

Banner Clip EZ-BNRCLP

Slide the turned edge of the banner down into the hook end of the clip, about every two feet, then attach clips onto truss tube.

Alternately, you can attach the clips to the truss first, with the hook end facing out, then firmly insert graphic into clip.

Your exhibit drawing shows whether to attach the clips onto the top or bottom truss tube.

Repeat with bottom edge, only upside down.
